Inquiry form, materials room

2019 hosting of workshops to train specialists and supporters on tobacco dependence treatment

This project has received assistance from the Global Bridge · 2020 Japan Project with Pfizer and the Global Medical Grant, and thus we have been able to prepare workshops since last year.

From April 2019, we will start training workshops for supporters to assist with smoking cessation and smoking cessation treatments at 8 locations throughout the nation.

We hope that you could visit the nearest workshop.

We asked as many specialists as possible to participate in the workshops, for people who have difficulty quitting tobacco.

We think that these workshops can express the needs of those who have already given up in quitting tobacco.

* Participation in this one-day workshop is organized by the general incorporated association Japan Society for Tobacco Control.

This certified seminar for supporters of smoking cessation is a lecture that allows participants to acquire accreditation.

Contents of the workshops

1. Lecture based on the standard procedure manual for smoking cessation treatment
2. Smoking cessation treatment in psychiatry
Thinking about the method of smoking cessation on hospital premises
3. Using motivational interviews for smoking cessation treatment and assistance!

Regarding the practices of smoking cessation assistance that use motivational interviews

Learn in workshop format (workshop format)
